Doctors prescribe taking sildenafil 30 minutes before the planned sexual intercourse. Objective assessment is made by number of thrusts and intra-vaginal latency time, but there is no information regarding a normal range of number of thrusts, and the average intercourse lasts 4-7 minutes according to current literature. Treatment is usually with SSRIs™s and Sildenafil (Viagra,„ŷ). Generally disambiguation pills are quite safe, but overdose of Sildenafil Citrate might lead to heart attack, stroke, sudden changes in blood pressure or sudden death.
